

Hadi Ademola Surajudeen

Backend Engineer | Web & Mobile Developer

Phone: +234 813 855 3465 | Email: hadiademola@gmail.com | Location: Abuja, Nigeria | UTC +1

Website: hadiademola.com | GitHub: github.com/Hardeygold205 | LinkedIn: linkedin.com/in/Hardeygold205

Summary

I am a Backend Engineer specializing in web and mobile application development, with experience building and deploying production-ready applications using JavaScript, TypeScript, PHP, and modern frameworks including Node.js (Express), Laravel, and NestJS. I also have hands-on experience with WordPress CMS development, custom content management systems, and Linux server administration, including application deployment, CI/CD pipelines, Nginx, Apache, PM2, and GitHub Actions. I have a strong foundation in software architecture, REST API integration, database design, performance optimization, and building scalable, maintainable systems. My background in Physics has strengthened my analytical thinking and structured approach to solving complex engineering problems. I am passionate about building reliable, user-focused software that performs well in production.

Technical Skills

Languages:	JavaScript (ES6+) TypeScript PHP HTML CSS
Frontend & Frameworks:	React React Native Next.js Angular.js Livewire TailwindCSS Framer Motion
Backend & Frameworks:	Node.js Express.js NestJs Laravel Filament
Databases:	PostgreSQL MongoDB MySQL Redis Supabase Firebase
Server, Tools & Platforms:	Git Github Actions WordPress Docker Linux SSH PM2 Apache Nginx Vercel Render cPanel Postman SwaggerUI Cloudflare

Experience

Nov 2025 – Present	Frontend/Mobile Developer	Extension Africa
- Collaborated with engineering team to develop and maintain web and mobile applications using React and React Native. - Assisted in refactoring existing codebase to improve maintainability and performance. - Worked closely with APIs and backend systems to deliver functional features. - Participated in debugging, testing, and resolving production issues.		
May 2025 – Sept 2025	Mobile Developer (Contract)	Play2score
- Developed a cross-platform mobile application using React Native and Expo Router with real-time features powered by Supabase. - Implemented authentication, real-time data synchronization, and push notifications for core user interactions. - Collaborated in a team environment using Git to deliver scalable and maintainable features.		
Aug 2024 – Apr 2025	Fullstack Developer & Project Management	Branovax Technology
- Collaborated with stakeholders to translate requirements into functional applications. - Built scalable full-stack solutions, handling frontend, backend, and database architecture. - Assisted in system design and code reviews within a team setting. - Monitored application performance and resolved issues to improve reliability.		

Projects

Noreta Farms	Next.js, TailwindCSS, Node.js, PM2, GitHub Actions, Nginx	Live Application
- Developed and deployed a production-ready corporate website using Next.js with optimized performance, responsive UI, and SEO best practices. - Configured Linux server deployment with PM2, managed environment variables, SSH authentication, and implemented automated CI/CD using GitHub Actions for zero-touch deployments.		
Extension Africa Academy	Next.js, Moodle (PHP), PM2, Apache, Github Actions	Live Application
- Built and deployed a learning platform integrating a Next.js frontend with a Moodle LMS, providing seamless authentication and course access. - Configured Apache, managed production deployments, and automated updates using GitHub Actions and PM2 to streamline the deployment workflow.		
Play2score App	React Native, Expo Router, Supabase, Firebase	Live Application
- Developed a cross-platform mobile application with real-time features, authentication, push notifications, and offline-friendly user experience. - Integrated Supabase services and backend APIs while collaborating in a Git-based development workflow to deliver production-ready features.		

JustShortlet Backend Service Node.js, Express.js, PostgreSQL, Redis, Swagger UI, Render [GitHub Repository](#)

- Designed and deployed a RESTful backend API for JustShortlet using Node.js and Express.js, with PostgreSQL for persistent data storage and Redis for caching and session management.
- Implemented secure authentication and authorization using JWT access tokens, refresh token rotation, role-based access control, and protected API endpoints for users, hosts, properties, bookings, and administrative operations.
- Developed and documented API endpoints with Swagger UI and deployed the production backend on Render, integrating environment-based configuration and production-ready database and Redis services.

Admin Dashboard Management Angular, Tailwind CSS, TypeScript, Vercel [Live Application](#)

- Designed and developed a responsive administrative dashboard with Angular and Tailwind CSS for managing JustShortlet users, hosts, properties, bookings, and platform operations.
- Implemented Angular routing, reusable components, dashboard layouts, authentication flows, role-based navigation, forms, and API integration with the JustShortlet backend service.
- Deployed the production Angular application on Vercel and integrated it with the Express.js REST API for authenticated data management and real-time administrative operations.

Education

2021 – 2025	B.Sc. Physics	University of Ibadan, Nigeria
• Strong foundation in computational methods, data analysis, and mathematical modeling.		
2023 – 2024	Software Engineering (Backend Track)	ALX Africa
• Trained in backend systems, data structures, and scalable application development.		
2022 – 2023	Frontend Web Development	FreeCodeCamp
• Built multiple projects including a personal portfolio, and a markdown previewer using HTML, CSS, JavaScript.
